IGNACIO DE PABLO

Product & Solutions Engineer · Data Analytics Builder (idepablo.com) · Bilingual EN/ES

Seattle, WA | idepabloc@gmail.com | (206) 822-7557 | linkedin.com/in/idepabloc | idepablo.com | github.com/idepablo

PROFESSIONAL SUMMARY

I'm a Product & Solutions Engineer with a data analytics core. Seven years in fintech operations taught me to start from the question a stakeholder actually needs answered, then work backward, whether the answer is a technical solution or an analysis in SQL, Python, Power BI, Tableau, or Excel. I've analyzed settlement data at scale ($50M+ monthly, 12,000+ merchants), built self-serve dashboards for leadership, and cut case resolution time 25% through root-cause analysis. I build data projects in public at idepablo.com, including AZIMUTH, a launch-market BI platform on Databricks. Bilingual (EN/ES).

CORE COMPETENCIES

Technical: SQL (PostgreSQL, MySQL: JOINs, CTEs, window functions) · Python (Pandas, NumPy, Matplotlib) · Power BI (DAX) · Tableau · Excel (PivotTables, Power Query, XLOOKUP, Macros) · REST API integration · Supabase · Data Cleaning

Analytical & Domain: KPI & Dashboard Design · Root-Cause Analysis · Data Quality · Process Improvement · Payments, Settlement & Chargeback Analysis · Trend Analysis · Stakeholder Communication · Bilingual (EN/ES)

EXPERIENCE

Product & Solutions Engineer | Synology, Bellevue, WA Aug 2026 – Present

Independent Projects & Continuing Education | Seattle, WA Mar 2024 – Aug 2026

Self-directed data analytics portfolio and full-stack builds while completing a B.S. in IT

- Built a portfolio of end-to-end SQL, Excel, Tableau, and Power BI analyses on real datasets, turning messy operational data into decision-ready findings published at idepablo.com, including a $1.76B World Bank IDA lending study (MySQL) and a Tableau dashboard spanning 1,800+ schools and 100+ metrics.
- Designed, built, and shipped a production web platform on a Supabase/PostgreSQL backend, integrating a third-party sports-data REST API via scheduled edge functions for live ingestion and an LLM (Anthropic Claude) chatbot, owning architecture, data modeling, integration, and debugging end to end.
- Paired a B.S. in Information Technology with an intensive Data Analytics Bootcamp to keep deepening SQL, Python, and BI skills.

Bilingual Financial Support Analyst | Gravity Payments, Seattle, WA Mar 2023 – Mar 2024

Transactional, billing & settlement data analysis and KPI reporting across a 12,000+ merchant portfolio

- Analyzed transactional, billing, and settlement data in Excel and Salesforce across 12,000+ merchants representing $50M+ in monthly settlement volume, surfacing discrepancies that protected recurring revenue from leakage.
- Owned KPI tracking for fees, chargebacks, and settlements and built automated dashboards, giving leadership self-serve visibility into portfolio performance and removing manual reporting bottlenecks.
- Cut case resolution time 25% by running structured root-cause analysis on financial and support data and standardizing the resulting investigation workflows.
- Partnered cross-functionally with Finance, Risk, and Sales to resolve high-impact merchant issues and communicate status clearly to stakeholders.

Bilingual Customer Success Engineer | Gravity Payments, Seattle, WA Dec 2016 – Mar 2023

Support-data analysis, KPI reporting & bilingual program operations in B2B payments

- Founded and scaled the company's Spanish-language merchant program from ~250 to 900+ accounts, contributing to a ~20% reduction in churn while tracking program health through support metrics.
- Analyzed support data in Excel to pinpoint performance gaps and drive measurable service improvements across the merchant base.
- Resolved ~30 complex merchant interactions per day across POS systems, integrations, and PCI compliance; trained and mentored 4 bilingual agents.

PORTFOLIO PROJECTS · IDEPABLO.COM

- **AZIMUTH, Launch Market Intelligence Platform (Databricks, dbt, Python, in progress):** End-to-end BI platform modeling the global launch market on a Databricks lakehouse. Phase 1 complete: resumable, idempotent backfill of 7,598 launches with a load audit table; now in Phase 2, silver modeling in dbt.
- **Boston Celtics Front-Office Analysis (Tableau):** Answered four front-office questions on shooting, playmaking, roster age, and depth across four related 2025-26 data sources, including why AVG of a ratio column misleads.
- **Mining Flotation Plant Analysis (Python):** Six months of iron ore flotation data in pandas: surfaced a hidden 13-day recording gap, two measurement rates in one table, and lag evidence that reagent dosing is reactive.
- **Employee Attrition Analysis (R):** Flagged three noise columns, showed how a valid t-test on the wrong column dismisses a true claim, and explained 90.5% of pay variation with job level.

EDUCATION

B.S., Information Technology | Western Governors University July 2026

Relevant coursework: Data Management (Foundations & Applications), Python (Programming & IT Automation), Applied Statistics, Cloud Foundations, Prompt Engineering.

MicroMasters, Analytics | Georgia Institute of Technology (GTx · edX) In progress, 2026

First step toward Georgia Tech's M.S. in Analytics (OMSA); enrollment targeted for Fall 2027.

Data Analytics Bootcamp | Data Analytics Accelerator (DAA) Mar – Jun 2026

CERTIFICATIONS

Cloud & Data: AWS Certified Cloud Practitioner · CompTIA Cloud+
IT & Systems: Google IT Support · CompTIA A+ · Linux Essentials
Networking & Security: CompTIA Network+ · CompTIA Security+
Project & Service Management: PMI CAPM · ITIL 4 Foundation

ADDITIONAL

Languages: English (Fluent) · Spanish (Native)
Interests: Fencing (USA Fencing member) · Cinema · Space exploration
Affiliations: PMI member · National & Puget Sound chapters
